

Home Health Agency App

Replication Playbook

Master checklist to spin up this compliance-management app for any new home health agency. Source-of-truth app: **Sister to Sister, PHCP** (June 2026 build).

1. Accounts & Credentials Required

A. Mandatory — cannot launch without these

#	Account / Service	Purpose	Cost	Who
1	Apple Developer	iOS App Store publishing	\$99 / year	Agency owner
2	Google Play Console	Android Play Store publishing	\$25 one-time	Agency owner
3	Firebase project (Google Cloud)	Push notifications (FCM)	Free tier	Agency owner
4	Domain + privacy-policy hosting	Required by both stores	~\$12 / yr	Agency owner
5	Emergent account	Builds, hosts backend + DB	Subscription	In place
6	Microsoft 365 admin email	Audit-binder → Outlook / OneDrive	\$0-15 / user / mo	Agency owner

B. Recommended (better UX, not strictly required)

#	Account / Service	Purpose	Cost
7	Microsoft 365 Business Basic	Adds OneDrive storage	\$7.20 / user / mo
8	Custom domain email	Trust signal in shareable packets	Included with M365
9	Logo design (vector PNG/SVG)	Branding inside PDFs + watermarks	Variable

For per-agency credential capture, use the *Intake Form PDF* (separate file).

2. Systems & Integrations Used

Layer	Tech	Purpose
Frontend	React Native (Expo Router, SDK 53)	Cross-platform iOS + Android + Web
Backend	FastAPI (Python 3.11)	Async APIs, auto-OpenAPI docs
Database	MongoDB (Motor async)	Flexible document store
Auth	JWT (jose) + bcrypt	Admin & caregiver roles
AI assistant	Claude Sonnet 4.5 / Emergent LLM Key	In-app compliance Q&A
PDF stamping	reportlab + pypdf	Watermarks, audit trail
E-signature	react-native-signature-canvas	Signature canvas embedded into PDF
Push notifications	Emergent Push (FCM + APNs)	Chat + shift change alerts
Microsoft Graph	MSAL + httpx + APScheduler	Monthly Audit Binder export

3. Per-Agency Tweak Checklist (~2-3 hours)

Frontend

- `/app/frontend/src/theme.ts` — BRAND_NAME, color tokens
- `/app/frontend/app.json` — name, slug, iOS bundle ID, Android package
- `/app/frontend/assets/` — logo, app icon, splash screen
- `/app/frontend/google-services.json` — new Firebase project file
- Login screen demo creds line (remove or update)

Backend

- `/app/backend/.env` — every MS_*, JWT secret, Mongo DB name, support email
- `/app/backend/core/pdf_utils.py` — LOGO_URL + watermark text
- `/app/backend/server.py` — seed-admin name/email
- `/app/backend/models.py` — onboarding-doc templates if list differs

Microsoft Azure

- New app registration per tenant
- Redirect URI: `https://<prod-domain>/api/ms/callback`
- Permissions: Files.ReadWrite, Mail.ReadWrite, Mail.Send, User.Read, offline_access — grant admin consent

App Store / Play Store

- Icons 1024² (iOS) and 512² (Android adaptive)
- 5–8 screenshots per device class
- Description, keywords, category = Medical or Business
- Privacy policy URL (must mention SSNs, health data, caregiver credentials)
- Content rating: Everyone / Medical

4. How This Build Was Assembled (in order)

- 1 Auth + base CRUD (users, clients, caregivers, MongoDB schema)
- 2 Custom branding (theme, logo, audit-binder watermark)
- 3 13 client + 14 caregiver onboarding PDFs seeded as templates
- 4 PDF watermark + in-modal e-signature canvas
- 5 Public packet share link (`/packet/[token]`)
- 6 One-tap 28 MB Audit Binder export
- 7 In-app chat (admin ↔ caregiver)
- 8 Push notifications via Emergent Push
- 9 Caregiver/client drill-down detail pages
- 10 Mutual assignment UI (caregiver ↔ client chips, idempotent)

- 11 Document push to specific users
- 12 Schedule tab (one-off + recurring, clock-in/out, edit/cancel notifications)
- 13 Microsoft 365 monthly export with auto-fallback (OneDrive → Outlook attachment)
- 14 Refactor: server.py split into core/ + models.py + routers/

5. Pre-Launch Checklist

- Brand assets dropped into /app/frontend/assets/
- theme.ts updated (name + colors)
- app.json updated (name, slug, bundle IDs)
- google-services.json placed for new Firebase project
- Backend .env updated (Mongo DB name, MS_* values, JWT secret)
- Audit-binder watermark text updated in pdf_utils.py
- Seed-admin email/name updated in server.py
- Apple Developer account active, certs generated
- Google Play Console active, keystore generated/stored
- Azure app registered, consented, redirect URI added
- Privacy policy URL live and linked
- App icons + screenshots ready
- End-to-end test admin + caregiver flows
- Test audit binder export → OneDrive or Outlook
- Test push notification on a real device build
- Click Emergent “Publish” button
- Wait for review: 1–3 days iOS, 1–3 days Android
- Approved → live on stores ■

6. Cost Per Agency (typical first year)

Item	One-time	Recurring
Apple Developer	—	\$99 / yr
Google Play Console	\$25	—
Domain (privacy policy)	—	\$12 / yr
Microsoft 365 Business Basic (optional)	—	\$7.20 / user / mo
Logo / icons (if outsourced)	\$50 – \$500	—
Emergent subscription	—	as-is
Total typical first year	~\$75	~\$110 / yr

7. Known Limitations / Mocked Pieces

- **Push key** (EMERGENT_PUSH_KEY) is a placeholder until the Emergent Publish flow swaps in the real one.
- **EVV** is a manual clock-in/out stub — replace with a true EVV vendor (HHAeXchange, Sandata, etc.) when needed.
- **Files** stored as base64 in MongoDB — fine for an MVP, move to S3 / Azure Blob at scale.
- **server.py** still has inline routes; modular refactor partially done.
